

In 2013, the GRF Board accepted the following final recommendations of the Ad Hoc Information Technology Task Force and then disbanded the Task Force.

1. That the Board commission a feasibility study in 2014 to provide valley-wide communication infrastructure. The study should include a Request for Proposal (RFP) to potential providers, including providers for a GRF-operated communication hardware infrastructure. Responses to the RFP will help the Board gain understanding on key areas such as technology overview, infrastructure requirements and cost structure.
  
2. That the Board establish a strategic plan to provide valley-wide Internet access to the residents in the next three to five years, keeping the Mutuals informed. Note that the new Comcast agreement and the facilities agreement terminate in four years at the year-end 2016. Attributes of this service should be that it is cost effect, secure, easy to use, and fit for purpose. This strategic intent will enable Rossmoor to maintain its standing as a premier retirement community. It will provide many tangible and intangible benefits to the current residents and attract potential buyers.
  
3. The development of a Rossmoor Community Portal architecture that could be the blueprint for providing a common gateway to date and services for authorized residents/owners, employees, vendors/contractors, and visitors.
